WARNING Metal angle is not provided by Silvercote
WARNING Metal angle is not provided by Silvercote

1. Metal angle (not provided)
2. Energy Saver adhesive tape
3. PIR board
4. Energy Saver adhesive tape

Wall panel
Eave strut
Full cavity insulation
Outside layer insulation
Wall girt

PIR Board Roof to Energy Saver Double Layer Wall Connection

SIL804-002 8/19
Before installing insulation in wall:

1. Attach the metal angle to the top flange of eave strut. The downward flange of the angle should be plumb with the inside of the girts. The angle used should be of heavy enough gauge to remain rigid.

2. Apply the supplied Energy Saver double sided tape to the top flange of the angle and the downward leg of the angle. Peel paper from tape on top flange to stick to the roof facing.

3. Install the roof insulation. Closures (not provided by Silvercote) may be needed to close decking corrugation. Install wall insulation.

4. Peel paper from tape on downward leg of angle and complete installation of the Energy Saver wall liner fabric by sticking it to the downward leg to create a continuous envelope.
